Warning

When the Flowmeter is installed at explosion hazard field, DON'T remove the COVERPLATE when the meter is powered. Please make parameter setting at safe filed prior to installation.

Special Notice

Pictures & Descriptions are for your information only, please refer to the actual product. Parameters are subjected to changes without notice.

1.0 GENERAL INFORMATION

This manual will assist you in installing, using and maintaining your turbine flow meter. It is your responsibility to make that all operators have access to adequate instructions about safe operating and maintenance procedure.

Warning

precautions against fire or explosion.

For your safety, review the major warnings and cautions below before operating your equipment

Use only fluids that are compatible with the housing material and wetted components of your turbine.

When measuring flammable liquids, observe

When handling hazardous liquids, always follow the liquid manufacturer's safety precautions.

When working in hazardous environments, always exercise appropriate safety precautions.

During turbine removal, liquid may spill. Follow the liquid manufacturer's safety precautions for clean up of minor spills.

Do not blow compressed air through the turbine.

Handle the rotor carefully. Even small scratches or nicks can affect accuracy.

When tightening the turbine, use a wrench on ly on the wrench flats.

For best results, calibrate the meter at least 1 time per year.

Product Description

HLY series turbine flow meters have the features: high accuracy, good repeatability, convenient installation/maintenance, simple structure etc.

Liquid flows through the turbine housing causing an internal rotor to spin. As the rotor spins, an electrical signal is generated in the pickup coil. This signal is converted into engineering units (liters, cubic meters, gallons etc.) on the local display where is applicable. Optional accessory modules can be used to export the signal to other equipment.

Upon receipt, examine your meter for visible damage. The turbine is a precision measuring instrument and should be handled carefully. Remove the protective plugs and caps for a thorough inspection. If any items are damaged or missing, contact

Make the turbine flow model meets your specific needs. For your future reference, it might be useful to record this information on nameplate in the manual in case it becomes unreadable on the turbine. Refer to the nameplate for your customized product's specification.

2.0 SPECIFICATIONS

Performance

Repeatability: ±0.2%

Accuracy: Standard: ±1% of reading;

Optional: ±0.5% of reading

Wetted Components

Housing: Standard - 304 Stainless Steel

Optional - 316 Stainless Steel

Bearings and Shaft: Tungsten Carbide

Rotor: Standard - 2Cr13 Stainless Steel

(Optional Alloy CD4Mcu)

Retaining Rings: 316 Stainless Steel

Output Signal: (Where applicable)

Sensor: Pulse signal (Low Level: ≤0.8V; High Level: ≥8V)

Transmitter: 4 to 20 mA DC current signal

Signal Transmission Distance: ≤1,000 m

Electrical Connections:

Basic Type: Hausman Connector or three-core cable

Explosion Proof Type: ISO M20×1.5 Female

Explosion Proof Level:

Standard: None

Optional: ExdIIBT6

Protection Level: IP65

3.0 OPERATION CONDITIONS

Ambient:

Temperature: -10°C to +55°C

Pres: 86 to 106 KPa

Relative Humidity: 5% to 90%

Power Supply:

Sensor: +12V DC (Optional: +24V DC)

Transmitter: +24V DC

Field Display Type B: Integral 3.2V Lithium Battery

(Others available on request)

Field Display Type C: +24V DC

Fluid Temperature and Pres:

Temperature: -20°C to +110°C

Pres: Fluid pres should be limited according to rating.

Measurable Flow Rate Range and Pres Level: (See table 1) Table 1.

Measurable Flow Rage Range and Pres Rating

Nominal Diameter		Standard Flow Range (SFR)	Extended Flow Range (EFR)	Standard Pres Rating	Customized Pres Rating
(mm)	(in.)	(m³/h)	(m³/h)	(MPa)	(MPa) - Flange Fitting
4	0.15	0.04 to 0.25	0.04 to 0.4	Thread: 6.3	12, 16, 25
6	0.25	0.1 to 0.6	0.06 to 0.6	Thread: 6.3	12, 16, 25
10	0.4	0.2 to 1.2	0.15 to 1.5	Thread: 6.3	12, 16, 25
15	0.5	0.6 to 6	0.4 to 8	Thread: 6.3; Flange: 2.5	4.0, 6.3, 12, 16, 25
20	0.75	0.8 to 8	0.45 to 9	Thread: 6.3; Flange: 2.5	4.0, 6.3, 12, 16, 25
25	1	1 to 10	0.5 to 10	Thread: 6.3; Flange: 2.5	4.0, 6.3, 12, 16, 25
32	1.25	1.5 to 15	0.8 to 15	Thread: 6.3; Flange: 2.5	4.0, 6.3, 12, 16, 25
40	1.5	2 to 20	1 to 30	Thread: 6.3; Flange: 2.5	4.0, 6.3, 12, 16, 25
50	2	4 to 40	2 to 40	Flange: 2.5	4.0, 6.3, 12, 16, 25
65	2.5	7 to 70	4 to 70	Flange: 2.5	4.0, 6.3, 12, 16, 25
80	3	10 to 100	5 to 100	Flange: 2.5	4.0, 6.3, 12, 16, 25
100	4	20 to 200	10 to 200	Flange: 1.6	4.0, 6.3, 12, 16, 25
125	5	25 to 250	13 to 250	Flange: 1.6	2.5, 4.0, 6.3, 12, 16
150	6	30 to 300	15 to 300	Flange: 1.6	2.5, 4.0, 6.3, 12, 16
200	8	80 to 800	40 to 800	Flange: 1.6	2.5, 4.0, 6.3, 12, 16

4.0 CAUTIONS FOR INSTALLATION

Mounting Positions

Turbine flow meters should be installed at the place in compliance with the requirements below:

- ♦ Easy maintenance
- ♦ No vibration

- No electromagnetic interface
- Away from heat source

Mounting Orientation

All turbine flow meters are designed to mea flow in only one direction. The direction is indicated by the arrow on the body.

Required Lengths of Straight Runs

Flow altering device such as elbows, valves and reducers can affect accuracy. See diagram 1 for typical flow meter system installation.

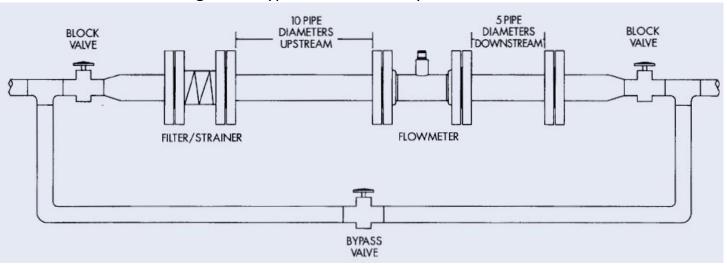

Diagram 1. Typical Flow Meter System Installation

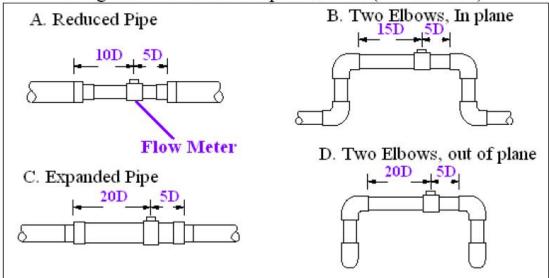

The recommended guidelines are given to enhance accuracy and maximize performance. Distance given here are minimum requirements; double them for desired straight pipe lengths.

- Upstream: allow a minimum straight pipe length at least 10 times the internal diameter of the pipe. For example, with the 50mm pipe, there should be 500mm of straight pipe immediately upstream. Desired upstream straight pipe length is 1000mm.
- Downstream: allow a minimum straight pipe length at least 5 times the internal diameter of the pipe.
 For example, with the 50mm pipe, there should be 250mm of straight pipe immediately upstream.
 Desired upstream straight pipe length is 500mm

See diagram 2 for straight pipe length requirement when there is altering device.

Diagram 2. Number of Pipe Diameter (D=Diameter)

Warning: Precaution for direct sunshine and rain when the meter is installed outside.

Anti-Cavitation

Cavitation can be caused by entrained air, and it can seriously damage the rotor on a turbine flow meter. An amount higher than about 100 mg/l of entrained air or gas can produce error. In addition, cavitations can be caused by too little back pres on the flow meter. For turbine flow meters, you should provide a back pres (downstream pres) of at least 1.25 times the vapor pres, plus 2 times the pres drop through the flow meter. See formula 1.

Formula 1:
$$P_b \ge 1.25 \times P_v + 2 \times (P_{in} - P_{out})$$

In formula 1: $(P_b: Back pres; P_v: Vapor Pres; P_{in}: Inlet Pres; P_{out}: Outlet Pres)$

Create back pres by installing a control valve on the downstream side of the meter at the proper distance detailed above.

Special Notice

- ◆ Foreign material in the liquid being mead can clog the meter's rotor and adversely affect accuracy. If this problem is anticipated or experienced, install screens to filter impurities fromincoming liquids.
- ◆ To en accurate measurement, drain all air from the system before use.
- ♦ When the meter contain removable cover plates. Leave the cover plate installed unless accessory modules specify removal. Don't remove the cover plates when the meter is powered, or electrical shock and explosion hazard can be caused.

Thread Connections

- 1. To protect against leakage, seal all threads with an appropriate sealing compound. Make the sealing compound does not intrude into the flow path.
- 2. Make the arrow on the outlet is pointed in the direction of the flow.
- 3. Tighten the turbine onto the fittings. Use a wrench only on wrench flats.

Flange Connections

For standard product, the flange follows GB/T 9119-2000 (ISO 7005-1) RF (Raised Face).

Note: flange can be customized following other criterias.

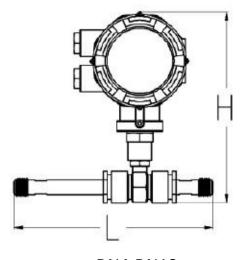

Use a gasket between the meter flange and mating flange. Determine the material of the gasket based on the operating conditions and type of fluid.

Note: Do not over tighten the flange bolts. This may cause the gasket to be compressed into the flow stream and may decrease the accuracy of the meter.

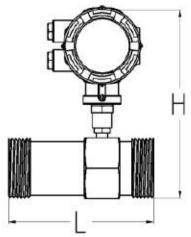

5. INSTALLATION **DIMENSIONS**

Thread or flange connection is used according to different flow models.

Thread connection dimensions

8.0 TROUBLESHOOTING

Symptom	Probable Cause	Solution
Meament is not accurate	 Turbine operated below minimum rate. 	Increase flowrate. Refer to Section 3.0 Operation Conditions
	2. Turbine partially clogged with dried liquid	Remove turbine. Clean carefully. Make rotor spins freely.
	3. Installed too close to fittings.	Install correctly. Refer to Section 5.0 Cautions for Installation
· · ·	Battery Power Type: Bad contact on the connector between battery and PCB	Open back cover and repower the flow meter
	2. DC Power Type: supply voltage is abnormal	Check and en power supply is 24V DC

Limited Warranty Policy

Hereby provides a limited warranty against defects in materials and workmanship. This product includes a l-year warranty. The warranty period shall begin on the date of the original new equipment purchase. Warrantor's obligation hereunder shall be limited to repairing defective workmanship or replacing or repairing any defective parts.

In the event Purchaser believes the product is defective, the product must be returned to, transportation prepaid by Purchaser, within the appropriate warranty period relative to the product. If 's inspection determines the workmanship or materials are defective and the required maintenance has been performed and, has been properly installed and operated, the product will be either repaired or replaced, at 's sole determination, free of additional charge, and the goods will be returned, transportation paid by , using a transportation method selected by .

Prior to returning the product to , Purchaser must obtain a Returned Material Authorization(RMA) Number from 's Customer Service Department within 30 days after discovery of a purported breach of warranty, but not later than the warranty period; otherwise, such claims shall be deemed waived.

If 's inspection reveals the product to be free of defects in material and workmanship or such inspection reveals the goods were improperly used, improperly installed,and/or improperly selected for service intended,will notify the purchaser in writing and will deliver the goods back to Purchaser upon receipt of Purchaser's written instructions and agreement to pay the cost of transportation. If Purchaser does not respond within thirty (30) days after notice from , the goods will be disposed of in 's discretion.

does not warrant the product to meet the requirements of any safety code or other jurisdiction, and Purchaser assumes all risk and liability whatsoever resulting from the use thereof, whether used singlely or in combination with other machines or apparatus.

This warranty shall not apply to any product or parts thereof, which have been repaired outside 's factory or altered in any way, or have been subject to misuse, negligence, or accident, or have not been operated in accordance with 's printed instructions or have been operated under conditions more severe than, or otherwise exceeding, those set in the specifications.

FOR NON- WARRANTY REPAIRS OR CALIBRATIONS, consult for current repair/calibration charges. Have the following information available BEFORE contacting:

- 1.P.O. number to cover the COST of the repair/calibration,
- 2. Model and serial number of the product, and
